

PageR Enterprise (PageR) is a world leading software solution for network-wide server, device and event monitoring of multi-OS environments. PageR provides a central event console that can collect, filter and display status and event information for all server, TCP/IP, SNMP and other devices or issues on your local or worldwide network. Events, whether normal status updates or critical warnings, can be flagged to automatically and immediately trigger alert notifications to remote personnel via pagers, mobile phones, email and more. You can even have PageR run scripts and commands or launch applications automatically when events occur. Better still, PageR is easy to use and can typically be set up and monitoring within the first hour of use. This is especially true after users read the *"Getting Started with PageR Enterprise"* manual.

PageR is very unique in the range of events and servers that it can monitor, from the basic "Are you there?" network pings to complex computer room environment monitoring, server or power crash detections, web page monitoring, "deep" monitoring on legacy systems, and much more. On Windows NT/2K/XP/2K3 servers, any event written to an Event Log (i.e. System, Security, Application) can be used as a trigger for immediate, remote notification and corrective action. Mixed platform networks are fully supported by logging in directly to Novell NetWare, UNIX, OpenVMS, HP3000, RS6000, AS/400 and others. These systems can even pass alert notification responsibility to PageR for redistribution and automatic corrective action. **"NO AGENTS ARE USED OR REQUIRED!"**

PageR allows notification to individuals, groups, hierarchies, escalations, different people at different times and for different issues. Users can set up redundant methods of notification, scheduled checking, dependencies and blackout periods. And, if users need to connect to PageR remotely, like while visiting a remote work facility or from home, they can use the PageR web browser interface to make system checks or configuration changes from anywhere in the world via the internet!

Enterprise Edition monitors ALL the Windows NT/2K/XP/2K3 servers, systems, event logs, files, disks, devices and objects on the network, and includes monitoring Novell NetWare Servers, network-wide IP Ping capability and SNMP Traps. It also includes Unlimited Contact Objects, Unlimited Alarm Objects, powerful Web Browser Interface, Unlimited Web and Manual Paging, Website and Web Server monitoring, WMI, Win32, Network-Wide Event Console, Network-Wide Systems Console, multi-level Web Browser Access/Security, Scalable Architecture, Sophisticated Alerting to Individuals/Groups/Hierarchies, Superior Support in both pre-sales and post-sales, and optional Computer Room Environment & Security Monitoring. 'Enterprise' is the 'Network-Wide, Windows-Centric' version of PageR!

Unlimited Object License: Monitored Objects are items or issues that you set up within PageR to watch or monitor (i.e. servers, devices, logfiles, services, web pages, systems, performance counters, ports, SNMP devices, files, more). Some monitored objects allow monitoring of an unlimited number of similar or related items/issues, while others like a 'ping' monitored object allow the monitoring of just one item. Users can select what to monitor and change as their needs change.

Protect Your IT Facility... *Don't Wait Until It's Too Late!*

Features & Specification For PageR Unlimited Object Enterprise

Software

Host System OS	Windows NT, 2K, XP, 2K3, VISTA
Alert Methods (Types)	Email, SMS, SNPP, Dial-Out Notification, Windows Messenger, Windows Pop-Up Broadcast, Audio, Skype, Fax, Logfile, Web Page, Console...
Alert Devices (Examples)	Mobile Phone, Pager, PDA, BlackBerry, Computer, Web Page, Log File, Desktop, Console, Light, Audio Fax, Phone, Network Device, etc.
Alert Hierarchies & Escalation Schedules	Yes, Unlimited Levels
Alert Limits	Unlimited
Alert Delay (Wait) Capability	Yes
Contact Limits	Unlimited
Contact Groups	Unlimited
Automatic Response On Event Start	Yes
Automatic Response On Event Resolve	Yes
Action Capability	Yes
Command Capability	Yes
Script Capability	Yes
Scheduling	Yes
Dependencies (Prioritized Alerting)	Yes
Alarm Cancel Notifications	Yes
Web Browser Interface	Yes
Access Levels	3
Password Security	Yes
Simultaneous Users	Unlimited
Manual Text Messaging Interface	Yes, Secure, Logged
SNMP Trap & Query Enabled	Yes
SNMP MIBS Built-In (All Leading Products)	Yes
Application Notes Available	Yes, In Manual, On CD & Online
Network-Wide Monitoring	Yes
Maximum TemPageR & Room Alert Units Monitored	Unlimited, Single Screen
Logging Of Real-Time Data	Yes, Limited Only By Disk Space
Easy To Use Graphic Interface	Yes, No Rules, No Agents
Maintenance Support & Update Service (MSUS)	12 Months Included, Unlimited
Unlimited Toll Free Technical Support	Yes
Assigned Product Specialist	Yes
Software Distribution	Download & CD Media
Software Update Frequency	3-4 Times Per Year
CD Updates Shipped	1-2 Times Per Year
PageR Getting Started Manual	Yes, 28 Pg
PageR Documentation	Yes, 600+ Pg
Current MSUS Required For New Software Keys	Yes

PageR Unlimited Enterprise Includes:

- (1) PageR Unlimited Enterprise License
 - CD Installation & Resource Media
 - Printed *PageR Enterprise User's Guide & Reference Manual*
 - Printed *Getting Started With PageR Enterprise Manual*
 - 12 months of Maintenance, Support & Update Service (MSUS), unlimited support
 - Toll Free Sales & Technical Support
 - AVTECH's 20 years of experience
