

Talking Clock

The Talking Clock has been used over the years by 911 centers or anyone that wanted to transfer a recorded call over to cassette tape or any other media and retain the Date and Time information of that call. This has also been used by Air Traffic Controllers desiring to hear the audible Date and Time when playing a call.

To activate this feature you click on the “Hammer” icon at the bottom of the main Search screen. This will pop up a window that has the “AGC” Volume Control and the two check boxes, one for Synchronized Multi Channel Playback and the other for the Talking Clock.

Just check the box next to Talking Clock and this will activate the feature. In the Search Screen when you click on a call you will hear a synthesized voice telling you the Date and Time of the call before the call is played.

NOTE: If you are switching from Talking Clock to no Talking Clock then you need to go back and uncheck any calls that you had checked previously because it will continue to give you the Talking Clock on those calls until they are unchecked.
